

# NZA LAW Project - Coding Temple (Group project)

In this project, you will be tasked with creating a website clone for a “law firm”. This website’s mock design will be given via slack.

One person will need to create with starter files that will label who works on which part of the site. Leaving detailed label comments will ensure minimal code conflicts when the final coffee is merged together. You will also need to create a README file detailing who worked on specific parts of the site.

Once completed, submit the merged project to Google classroom.

## TASK:

- Create a medium size screen layout of the site using CSS3 with Bootstrap.
  - **\*\*Challenge\*\*** Create a responsive design using Bootstrap

***IMPORTANT NOTE*** : The project is not considered complete until it has been checked in (uploaded) to your GitHub account and the link posted to the slack channel.

No longer in use - IGNORE
